

WSI would like to invite you to visit our exhibit booth (#401) at the upcoming 88th Annual AMS Meeting in New Orleans, January 20-24.

We are very pleased to be attending this event, and would value setting aside some time with you to discuss the USPLN and your lightning needs in 2008. This will be a great opportunity to talk about the expansion of the USPLN, products and services that will assist you and your customers, and any other topics of interest. If you will not be at the meeting, feel free to pass this along to any of your participating co-workers or stay tuned for new product and service announcements in 2008.

We also hope you will stop by the booth and learn more about...

- ...EEC, which is now part of WSI, and has more than 850 advanced radar systems deployed around the globe. Together, the mission of the two organizations is to provide next generation weather products that will enable customers to anticipate severe weather earlier, and take action faster.
- ...the dramatic advances in dual polarization, ultra-high definition, and simplified hardware designs all aimed at providing better insight into storms at more affordable prices. View the demonstrations of the improved EDGE software, as well as WSI's dazzling on-air broadcast systems integrated with EEC radars.
- ...WSI's latest developments in global forecast modeling, as well as applications for aviation, media, energy and government.

As always, we can be contacted directly with your thoughts or questions at the email and phone number below.
